"Technology For The Environment"

ProGreen[®] Chiller

Innovative Solutions to Industry Challenges

FSI's ProGreen[®] Chiller vapor abatement equipment utilizes RSI's ICE technology to power a refrigeration unit that condenses hydrocarbon vapors back into liquid state.

Why is this important to you?

- Provides a 30% to 60% reduction in the amount of vapors that require abatement
- Reduces time exposed thru Explosion Range
- Extensive compliance report generation capabilities
- Huge impact on reduction of Greenhouse Gas
- Delivers faster project turn-over
- Recovers usable product
- Permitted by SCAQMD
- Reduces overall costs
- Waste minimization

Innovative Applications

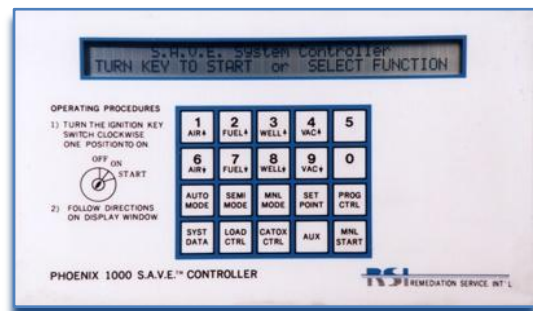

Partnership of Technology and Services

ProGreen® Advantages

- Pipeline degassing
- Automated & user friendly
- Vacuum truck exhaust abatement
- Small footprint (trailer or truck mounted)
- No carbon regeneration or disposal cost
- Above and below ground tank degassing
- Vapor control on waste reduction projects
- Remove any unwanted hydrocarbon odors
- Uses process vapors as primary fuel source
- Vacuum pump and air Abatement device combined
- VOC destruction rate efficiency (DRE) greater than 99%

Efficient Control Technology

Safety Features

- Constant LEL monitoring
- Proven standard operating procedures
- Auto and manual emergency shut down devices
- Built-in automatic fire suppression system and other safety devices
