

## FSI Remediation Services

### Soil and Water Remediation

- Ground water treatment
- Soil vapor extraction (SVE)
- Multi-phase extraction
- Water treatment
- Free Product Removal
- Bio-Venting/Air Injection
- Bio-Slurping - Dual Phase Extraction
- Dual Phase Extraction and Air Injection

**VAPORS CAN BE CONDENSED BACK INTO LIQUID FOR RECYCLING!**

### What is “Green and Sustainable” Remediation?

Yesterday’s remediation approach often impacts the very environment (soil, groundwater or air) that is under-going restoration. For example, remediation equipment is typically powered from the grid, or is fueled by diesel generator, both resulting in increased greenhouse gas emissions (GHG). This is even more prevalent with air pollution control equipment using oxidization in that they require energy to destroy energy. Today one must consider the short and long term effects associated with remedial activities. Patents & Patents Pending

***The only soil vapor extraction/air abatement systems that meet the criteria of “Green & Sustainable” Remediation!***

### Technology for the Environment!

Our proven technology is safe and more cost efficient than most current methods, using portable equipment with a minimum footprint.

Remediation Service, Int'l (RSI), a division of Innovative Solutions Environmental Solutions, LLC, is a leading manufacturer of self contained, portable systems for soil and groundwater remediation.

Our FSI crews consist of full-time personnel trained by WorkSafe and LPS to do their work safely and efficiently. FSI will do a professional job at a competitive price and keep your out-of-service time to a minimum.

The ICE equipment is a highly mobile remediation system and can be placed
